C. AMENDMENTS TO THE CLAIMS

In order to better assist the Examiner with the prosecution of the case, the current pending claims have been included in their entirety for which reconsideration is requested.

Subp. 7

A
3

1. (AMENDED) A method, in a server data processing system, for servicing a request for a resource requested by a client data processing system, comprising:

receiving the request for the resource;

determining if the resource requires at least one prerequisite resource; and

sending a different resource having a content having a modification of combining the requested resource content and at least a portion of content of at least one prerequisite resource if the requested resource requires [a] the prerequisite resource.
2. (Original) The method of claim 1 further comprising keeping track of each request made for the at least one prerequisite resource for each requester within a tracking parameter.
3. (Original) The method of claim 2 wherein the tracking parameter is for a predetermined amount of time.
4. (Original) The method of claim 3 wherein the predetermined amount of time is a configurable amount of time.

5. (Original) The method of claim 2 wherein the tracking parameter is for a predetermined number of requests for the requested resource.
 6. (Original) The method of claim 2 further comprising determining if a previous request has been made by the requester for the prerequisite resource within the tracking parameter if the requested resource requires a prerequisite resource.
 7. (Original) The method of claim 6 wherein the different resource is sent if the resource requires a prerequisite resource and if it is determined that any previous request by the requester for the prerequisite resource has not been made within the tracking parameter.
 8. (Original) The method of claim 1 wherein the determining step further comprises determining which at least one resource is the at least one prerequisite resource.
 9. (AMENDED) The method of claim 1 wherein the content of the different resource ~~modification~~ comprises overlaying at least a portion of the prerequisite resource on the content of the requested resource.
 10. (AMENDED) The method of claim 1 wherein the content of the different resource ~~modification~~ comprises merging the content of the prerequisite resource with the content of the requested resource.
 11. (AMENDED) The method of claim 1 wherein the content of the different resource ~~modification~~ comprises changing a resolution of the requested resource to a lesser quality.

12. (AMENDED) The method of claim 1 wherein the content of the different resource modification comprises changing color depth.
13. (AMENDED) A method, in a client data processing system, for receiving a resource in response to a request to a server data processing system, comprising:
- sending the request; and
- receiving a different resource than the requested resource if the requested resource was a deep hyperlink wherein the different resource has a content combining the requested resource content with at least a portion of another resource content wherein the link to the requested resource can be reached ~~from the~~ by following links from link to the another resource content.
14. (AMENDED) A server data processing system having means for servicing a request for a resource requested by a client data processing system, the server data processing system comprising;
- means for receiving the request for the resource;
- means for determining if the resource requires at least one prerequisite resource; and
- means for sending a different resource having a content ~~having a modification of combining~~ combining the requested resource content and at least a portion of content of at least one prerequisite resource if the requested resource requires [a] the prerequisite resource.

15. (Original) The data processing system of claim 14 further comprising means for keeping track of each request made for the at least one prerequisite resource for each requester within a tracking parameter.

16. (Original) The data processing system of claim 15 further comprising means for determining if a previous request has been made by the requester for the prerequisite resource within the tracking parameter if the requested resource requires a prerequisite resource.

17. (AMENDED) A client data processing system, having means for receiving a resource in response to a request to a server data processing system, the client data processing system comprising;

means for sending the request; and

means for receiving a different resource than the requested resource if the requested resource was a deep hyperlink wherein the different resource has a content combining the requested resource content with at least a portion of another resource content wherein the ~~link to the requested resource can be reached from the link to~~ by following links from the another resource content.

18. (AMENDED) A program, having computer readable program code means, on a computer usable medium, at a server data processing system, for servicing a request for a resource requested by a client data processing system, comprising;

instruction means enabling receipt of the request for the resource;
